

Uphemerides. &c. 756. a. 3
Merlinus Liberatus. *7*

BEING AN *pp. 2465*

ALMANACK

For the Year of our Redemption,

1 7 5 3.

Being the First after *Bissextile*, or *Leap-Year*.

And from the Creation of the World, according
to the best History, 5702.

And the 61st of our Deliverance by *K. William*
from Popery, and Arbitrary Government.

But the 57th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contain'd all Things fitting and useful for such a
Work, as an Ephemeris of the Daily Motion of the Planets
with their various Configurations, Aspects, Conjunctions,
Lunations, Eclipses, Astronomical, Astrological, Meteorolo-
gical Observations, the Rising and Setting of the Sun,
Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and Daily Equation of Clocks, Length
and Break of Day, &c. Also a Vindication of Steliary
Influence; with two Exemplary Nativities, shewing the
Power of the Stars, and Verity of Astrology.

To which is prefix'd,

The Protestant Remembrancer.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 }

By **JOHN PARTRIDGE.**

— *Etiam Mortuus Loquitur.* —

LONDON: Printed by *R. REILY*, for the
Company of **STATIONERS**

PROLOGUE, or INTRODUCTION

Popish Superstition and Transubstantiation Display'd.

SHUT your Eyes close, believe me, and you'll see
 What was never yet, and what will never be.
 Wink, and believe me, quoth the Popish Priest,
 This Wafer's God —— ! You laugh, and think I jest;
 But if you are afraid of being sham'd,
 And dare to doubt it is not God, you're damn'd.
 This very Paste is very God, he cries,
 And you, forsooth, would rather trust your Eyes:
 The more you wink, the more you'll Light receive,
 The less you reason you'll the more believe,
 Church cannot err; but if she could I know
 The Thing myself —— I made it Flesh of Dough.
 Pin on my Sleeve your Faith, and tho' you're blind,
 Take but fast hold, and follow me behind,
 My priestly Eyes the Way for both will find.
 This Wine and Wafer now are common Food,
 But Hocus Pocus, and they are Flesh and Blood.
 From *hoc est corpus*, Hocus Pocus came,
 Tho' Flesh and Blood, the Bread and Wine the same.
 Hang Sense! 'tis Faith that must the Business do,
 The Church hath said it; and I say 'tis true.
 What wou'd you have? your Senses this deny.
 Your Senses! damn your Senses; Sir, they lye;
 Can the Church err? or if she cou'd, can I?
 The Cheat in Paradise was fairer far,
 The Devil dealt with *Eve* upon the Square;
 He bad her touch and taste, and feel and see,
 How fair the Fruit, how lovely look'd the Tree:
 She saw and felt, before she would believe,
 Nor did he transubstantiate to deceive.
 But here the Priest imposes on your Eyes,
 And cogs his God, as Sharpers cog their Dice.

The Protestant Remembrancer continued.

Being an Historical Account of the Horrid Popish Plots and Massacres, committed by the Papists upon the Protestants.

THE History of the Spanish Invasion continued from my Last. There were likewise Aboard in this Fleet 2038 Cannon, with Powder, Bullets, Match, Muskets, Pikes, Spears, Swords, Knives, Daggers, Skeines, Chains, and Whips, to torment and cut the Throats of *English* Protestants; and with them whole Swarms of Capuchins, Mendicants, and Jesuits. There lay in *Flanders*, 50,000 old Soldiers with 288 Vessels, ready to transport them, under the Duke of *Parma*; all the King of *Spain's* best Soldiers, even as far as *America*, being drawn forth for this Holy War: The whole of this Expedition having cost the *Spaniards* 12,000,000 of Crowns; the Pope likewise contributing a Million of Gold to this pious Design, and called it the *Invincible Armado*; but the Mercy of God defended *England*, and discomfiting this Mighty Armado.

With that mighty Fleet of Strength and Pride,
Our good G O D did the Cause decide;
The Lord of Hosts soon made them see,
There's none invincible but He:
He with a Breath of Wind did blast,
Designs so mighty and so vast,
That all might see that none but He,
An Universal King can be.

This mighty triumphant Fleet was driven Home with Shame, Loss, and Confusion; for out of 150 tall Ships which set sail out of *Lisbon*, only 33 returned: The *Spaniards* losing in this Attempt 97 Ships, and 13,500 Soldiers, and 2,000 more were taken Prisoners in *England*, *Ireland*, and the *Low-Countries*, the rest of the Navy being destroyed by the *English* and *Dutch*; the Seas and Rocks, Sands and Tempests, all seeming to conspire to the defeating of this insolent, barbarous, wicked, Attempt. *Gloria Deo*. Yet these tyrannical Sons of *Belial*, who never take notice of God's blasting their wicked Designs, but grow more desperate and enter upon the most barbarous and hellish Plots and Conspiracies, that ever were hatched in the Brain or Heart of Man. But for a further Account you may expect in my next.

A Table of the Moon's Age every Day throughout this Year 1753. Whereby, with the Help of the next Tide Table, the Time of High Water at all those Places is shewed by Inspection.

Days Month.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

31	27	—	26	—	28	—	1	3	—	5	—	—

Explanation of this, and the following Table.

Find the Month on the Head, and the Day in the First Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with it enter the following Table, and you'll find the Time of High Water at all the Places above-mentioned.

Example. January the 15th, you'll find the Moon 11 Days old, and over against 11 you'll find 11 Hours 48 Minutes, (and on the Top, London, Tinnmouth, Hartlepool, &c.) which is the Time of High Water. *Et sic de cæteris.*

A ge V	enter this Column with the Moon's Age, and over against it you have the Time of High Water at the Places above.

A Table of Terms and their Returns, for the Year of our Lord 1753.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Elfoign Days.		Exc.	Ret.	App	D. W.
In eight Days of St Hilary,	Jan. 20	21	22	23	Tuesd.
From the Day of St Hilary in 15 Days,	27	28	29	30	Tuesd.
On the morrow of Purif. of bl. V. Mary,	Feb. 3	4	5	6	Tuesd.
In eight Days of the Purif. of bl. V. Mary,	6	10	11	12	Mond

Easter Term begins May 9, ends June 4.

From the Day of Easter in 15 Days,	May 6	7	8	9	Wedn.
From the Day of Easter in 3 Weeks,	13	14	15	16	Wedn.
From the Day of Easter in 1 Month,	20	21	22	23	Wedn.
From the Day of Easter in 5 Weeks,	27	28	29	30	Wedn.
On the morrow of the Ascension,	June 1	2	3	4	Mond

Trinity Term begins June 22, ends July 11.

On the morrow of the holy Trinity,	June 18	19	20	22	Frid
In eight Days of the holy Trinity,	24	25	26	27	Wedn.
From the Day of the holy Trinity in 15 Days,	July 1	2	3	4	Wedn.
From the Day of the holy Trinity in 3 Weeks,	8	9	10	11	Wedn.

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the morrow of All-Souls,	Nov. 3	4	5	6	Tuesd.
On the morrow of St Martin,	11	13	14	15	Thurs.
In eight Days of St Martin,	18	19	20	21	Wedn.
In 15 Days of St Martin,	25	26	27	28	Wedn.

N. B. No Sittings in Westminster-Hall on Ascension-Day, Midsummer-Day, and the 2d of February.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, That the first and last Days of every Term, are the first and last Days of Appearance.

The Law's a Thing Divine, made to repel
The sinful Lusts of such as do rebel,
Against right Reason, Justice, Faith, their Prince,
And, for the injur'd Man, a good Defence;
It's Use is to correct, and keep in Fear,
Such as don't value what they act or swear.

January hath XXXI Days.

Happy blooming Year! Heaven ne'er deny thy Smiles
 To our great Monarch, and his happy Isles;
 May his wise Counsels every where succeed,
 Whilst all his Foes, with Grief do inward bleed;
 We safe at Home, in Peace, yet fierce and bold,
 Tho' Janus brings this Month Increase of Cold.

This Month Increase of Cold.											21	1	8

We are too subject to
 discompose our Spirits
 with Cares and Fears and
 other Perplexities, by
 which we often bring
 ourselves in voluntary
 Distress; let us hope well
 and trust to Providence.

February hath XXVIII Days.

Whence flows the hidden Springs of Nature's Store,
That this Month seems to open rather more,
Replenishing than others, Ponds and Ditches,
As Misers fill their Money-bags with Riches,
But this is surely for a secret Store,
Against the approaching Spring that's never poor.

March hath XXXI Days.

Rome's regal *Romulus*, this Month did name,
 In Honour of God *Mars*, from whom he came :
 Aiming thereby for to perpetuate
 The (brittle) Glory of the *Roman* State,
 It is a vigorous Month, wherein the Ram,
 With blustering Storms, receives the radiant Sun.

	☉	☿	♈	♉	♊	♋				
1							3 55	4 M 21	10 M 11	Here are some pa- cific Configurations of the Planets in this Month, as the * of ☉ and ♈, the Δ of ☉ and ♉, the * of ☉ and ♊: Which signify that Happi- ness, Prosperity, Ju- stice, Piety, and Re- ligion to flourish, Judges and Noble- men are had in Esti- mation, the King in- creases in Power and Glory, and the Earth bringeth forth it's Fruits plentifully: But the Aspects of the preceding Month will abate their Glory. The 26th Day of this Month 1721, was born the most il- lustrious and heroic Prince William Duke of Cumberland, 2d Son to his sacred Majesty King George the Second.

May hath XXXI Days.

Here rules in State majestic, and from hence
Sheds on the Earth a distant Influence,
Let plodding Sots in trifling Works engage,
Recount the Actions of the World's great Stage,
For Ages past in dusty Volumes pry,
And trace Mankind back to their Infancy.

A Nobler Scene invites my Thoughts to roam,
Not what is past, but yet what is to come ;
As far as Poets yeild to, the Prophets Name
Her place about the Arts, Astrologys doth claim.
Astrology ! O science all Divine,
What Praises can be spoke, that are not thine ?

July hath XXXI Days.

By which an open Way to Man is given,
To search secret Depths, & read the Will of Heaven;
Our Souls, while thus employ'd, are like the space,
On which we do our Contemplation place;
No Storms so high to reach your Regions, swell,
Nor we' nor Sky, the Fury fear, which each foretell.

August hath XXXI Days.

But some will Urge, to tell them if we can,
How senseless Stars can Act on thinking Man;
Were not the Soul close in the Body joyn'd,
To this her Prison, in strong Chains confin'd:
Did she not hence her Notices receive,
Become susceptible of Joy and Grief.

September hath XXX Days.

Did she not wholly to the Body owe,
 What e'er she feels, whatever she doth know;
 We then might Wonder, that the Stars make Fate,
 That Matter can on Spirits Operate;
 When gathering Clouds contract the Hemisphere,
 And Damps descending, clogs the Lazy Fear.

October hath XXXI Days.

Observe but then the Motions of the Eye,
 Where the Soul's Movements you may best descry;
 Through this her Windows you may plainly View,
 The Goddes's Flag, beneath the Elemental Dew;
 But when the weary Mists at length are fled,
 And now no more, the ethereal Plains are spread.

November hath XXX Days.

When lightn'd Air transmits the vivifick Ray,
And every Heat welcomes returning Day ;
The vigorous Spirits to the Eye resort,
And veger Joys around the Temple's sport ;
But granting that ; we still must own the Mind
Be free, unsubjogated, unconfin'd.

December hath XXXI Days.

The Empire o'er himself to Man is given,
 Outward Events to the Influence of Heaven ;
 Hence deep Designs, we often frustrate see,
 Nor wisest Plots can baffle Fates Decree ;
 Decrees of Fate writ in the Stars we know,
 Not to elude, but break the coming Blow.

Many high and
 lofty Debates are
 under Considerati-
 on; also in this
 Month abundance
 of flying (and no
 less lying) Reports
 are spread abroad
 in most parts of
 the Nation, which
 do most strangely
 amuse the People,
 who most greedily
 swallow any thing
 new, true, or false;
 many violent head-
 strong Actions com-
 mitted, and the Ac-
 tors thereof must
 expect to smart for
 their Folly, when
 'tis too late to re-
 pent.

Soli Deo Gloria.

A TABLE of the common Notes and Moveable Feasts
for the Year of our L O R D 1753.

Golden Number	6	Shrove Sunday	Mar. 4
Cycle of the Sun	26	Easter-day	April 22
Epact	25	Holy Thursday	May 31
Roman Indiction	1	Whit-sunday	June 10
Dominical Letter	C	Sundays after Trinity	23

PARTRIDGE, 1753.

I. Stellar Influence vindicated and asserted

CANST thou bind the sweet Influences of the *Pleiades* or loose the Bands of *Orion*? says GOD to *Job*, chap. 38, ver. 31. Yet in this inquisitive, critical and censorious age, I observe several men so wedded to an adoration of the earth, that they willfully abandon and despise the use of the Stars and Planets; depriving 'em of all influence and energy, both in the Macrocosm and Microcosm, even against the testimony of scripture, and apparent diurnal proof thereof. To rob churches is justly deemed sacrilege; what is then to rob the Stars (who are next to Angels in power) of their energy and glories? sure this cannot be a lesser crime. The royal *Psalmist* saith, *The Heavens declare the glory of God, and the Firmament sheweth his handy Works.* Day unto day uttereth speech, and night unto night sheweth knowledge. There is no speech nor language where their voice is not heard. If these Star felons be permitted to go on without Detection; they will by degrees come not only to think cheaply of Heaven, but also think it not criminal to rob GOD. For if the glorious host of heaven (that fought in their courses against *Sisera*.) be despoiled of their military energy, the next work of the enemy to celestial order, is to bid defiance to the divine Being.

The most learned in all ages did contemplate on the beauty of the heavens, and made most curious observations on the energy of celestial bodies; and can any man in reason think or suppose, the Stars those curious lamps of light, that are placed in such excellent form and order over us, and at those exact distances we behold them, for no other use or end but merely to gaze on? to think so, were to render the most admired part of God's workmanship of mean, or rather of no use: which is a most unworthy affront put upon, not only the Stars of light, but Heaven itself; and greatly derogatory to the divine Majesty, who is God of order. If we consider the motions of the planets, either proper to every one of them about the *Sun*, as they appear to our eyes in their annual revolutions, or diurnal motions of them all from east to west; together with the signal inequality of each to other in respect to time, and yet unalterable regularity; whereby we can predict their mutual aspects and positions a hundred

P A R T R I D G E, 1753.

years beforehand. Likewise if we contemplate upon the planetary motions and their effects, that makes Summer and Winter, and produce animals, vegetables, and what not upon the earth and in the sea, as natural causes; do they not plainly demonstrate the eternal wisdom, power, glory and goodness of God, who has disposed them so agreeable to the divers influences he hath appointed them to dispence to this inferior world, and perhaps to each other, the better to raise our contemplation heaven-ward, and invite us to the study of them; and by them to approach the deity itself.

*Os homini sublime dedit cælumque tueri,
Jussit, & erectas ad sidera tollere vultus.
God gave to man an upright face, that he
Might view the stars, adore his majesty.*

The greatest enemy to planetary influence, may own themselves convinced by the words of St. Paul, who hath affirmed, *That the invisible power of the Deity was to be known by the things that are made*; and also that, *One star differeth from another star in glory and power*: and that the truth of God and nature is written in the cœlestial orbs above; and, that there is a constant intercourse & communication between heaven & the earth we live on.

*The heaven's a book, the stars are letters fair,
God is the writ r, men the readers are.*

The learned Cabalists do affirm no mean truth, when they teach us that there is *Crater superior*, which empties itself in *Craterum inferiorem*; even all the elementary world, which receives what is emptied from heaven into it; that, *omnes res inferiores representativæ sunt superiorum*; that as every herb hath its visible signature, which discovers it useful for one or other part of the body; so hath every one an influence from its proper star and angel governing it: Yea, *Omnis res animata habet a cælo stellam ad se influentem*: that there is neither herb nor plant, nor stone, nor mineral, nor man, nor beast, which receive not the influence of the stars.

From what has been said, 'tis reasonably evident, that the stars and planets have an unquestionable influence inherent in them, which they dispence upon the elementary matter, fitted and prepared for its reception; and that it is of so active and penetrating a nature and quality, as to occasion all meteorological variety to this terrene globe; thereby teaching us to magnify almighty God in his works.

PARTRIDGE, 1753.

II. *Astrology vindicated and asserted by Examples.*

ORIGEN from the narration of *Joseph*, affirming, that *Jacob* told his sons, the 12 Patriarchs, that he had read in the Tables of heaven, what'oever should befall them and their children. This knowledge in the language of the heavens or stars, is properly the science of **ASTROLOGY**; which for its antiquity, worth and purity, observe the words of the learned *Gerson*, in the preface to his *Trilogium Astro-Theologicarum*, viz. *Propterea non est hoc negandum de astrologia Adam, &c. sequentibus revelatam theologia non abnegat.* Wherefore it is not to be deny'd of astrology, but to be a noble and admirable science, revealed first to *Adam* and his posterity. Divinity refuseth or denieth not: (Likewise *Cardan*) *Astrologia altissima scientiarum est, tum quia de cœlestibus, tum quia de futu is, quorum scientia non solum divina est, sed etiam utilissima.* Seg. 1, Aph. 20. (i. e.) Astrology is the most transcendant of all sciences, both because it treateth of things cœlestial, and also of future; the knowledge whereof is not only divine, but most profitable and useful. Also, according to the opinion and excellent judgment of *P. de Ariaco*, in his concordance of astrology with divinity, proveth the flood, sects, schisms, and other most notable accidents, to be signified by the heavens long before. The learned *Gassarel*, the French critic, hath most elegantly proved (in his *Unheard-of Curiosities*) the patriarchs and ancient fathers were astrologers and observers of cœlestial energy; and that in preceeding ages, the most eminent divines, philosophers, poets, emperors, kings, and noble spirited persons, were great embracers of this laudable and noble science; witness *Virgil*, who was *Princeps Poetarum*. — *Observe the starry signs,*

*Where Saturn's houses and where Hermes' joins;
But first to heaven thy due devotions pay,
And annual gifts on Ceres' altars lay. And after
The Sun reveals the secrets of the sky,
And who dares give the source of light the lie?
The change of empires often he declares,
Fierce tumults, hidden treasures, open wars;
He first the fate of Cæsar did foretel.
And pity'd Rome, when Rome in Cæsar fell.
In iron clouds conceal'd the publick light,
And impious mortals, fear'd eternal night,*

PARTRIDGE, 1753.

Those that oppugn the innocence of astrology, make use chiefly of these two objections, *viz.* first, That it is vain & of no truth; secondly, that it is condemned by the maxims of our religion, which requires only obedience and humility. Now if this last argument had not already been answer'd by many authors, it would require me to answer and examine it in this place; but cardinal *de Aliaco*, *Lucius Bellantius*, *Malancthon*, the learned *Morinus*, Sir *Christopher Heydon*, Mr. *Buller*, Mr. *Atwel*, and others, have so judiciously done it, that the most critical must acknowledge their reasons to be most just and sound. And to the first objection I shall endeavour to evince the contrary; by precepts and examples of undoubted credit and authority. When I seriously consider the sublimity of this learning, it prevents my wonder at the contradictory cavals of the ignorant and rash antagonist, whose dimmer eyes are unable to penetrate the starry spheres, and thence discern the decrees of heaven at so great a distance. And I may well account it beyond the current of common hope, to reclaim those whose hearts and consciences are so zealously adamantine, and their brains like bulwarks, treble moted with prejudice and misprision; by the best of arguments and examples the wit of man is able to produce. Yet it is as conspicuous to me, as the Sun in his meridian lustre; that as all persons are not born to one and the self-same fate, so they are not heirs to one and the self-same faith and belief.

Deniq; non omnes eadem mirantur amantq; faith Horace.

All men are not of one faith or desire,

Nor do all, all things love, which some admire.

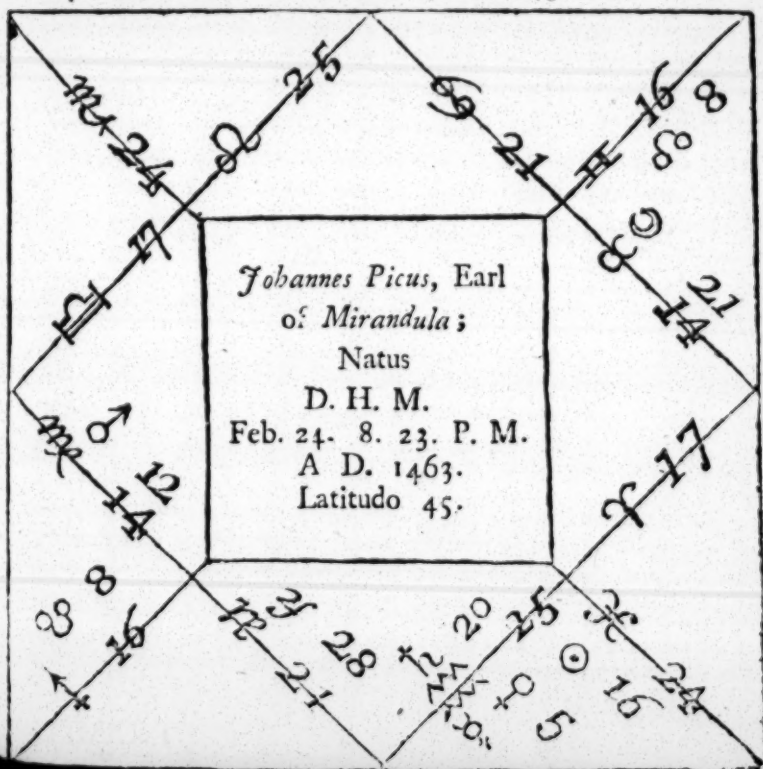

The lord *Bacon* in his advancement of learning, very justly imputes this difference to a superior cause (who faith) in the traditions of astrology the natures and dispositions of men are not without truth, distinguish'd from the predominances of the planets: as, that some are by nature made and proportioned for contemplation; others for matters civil, others for wars, others for advancement, others for arts, others for a changeable course of Life, &c. These things being premised, I come now to shew some remarkable verities in the genethliacal part of this art, and such as have gained credit with men of the best learning and judgment.

EXAMPLE

PARTRIDGE, 1753.

EXAMPLE I.

PICUS E. of *Mirandula*, was the most potent adversary that astrology ever had whilst he was living; and who for his fiery zeal in writing against astrologers, was termed *Flagellum Astrologorum*; the scourge of astrologers. This man (like many now a-days) contemn'd the power of the stars, disdain'd astrological predictions, and wrote reproachful calumniation; flattering himself he could wrangle away death, by writing against astrology: but his death gave the greatest conviction of the truth and verity of astrology, that could possibly be; for, being foretold by *Lucius Ballantius* (a famous astrologer of *Siena*) that he would not live past the 34th year of his age: and behold! while he sought to prove the art vain, his own death concurring exactly with the time foretold by the astrologer, confirmed it to be true; and more actually confuted what he had written against it, than if all the world had conspired to answer him. And here, for the satisfaction of the curious, I will insert his nativity, with some observations upon it; and shew the directions that proved the *Atrapos* to his life. R. A. M. C. 112. 43

PARTRIDGE, 1753.

I observe the direction that *Lucius Ballantius* and other astrologers in those times, grounded their prediction of his death from, was only the horse : *Ad corpus Martis*, without giving any other reason, which in my opinion, was a very bold prediction, though attended with Success. And whoever makes the same prediction on only that direction, or the same in other nativities, is very likely to be deceiv'd ; for I can shew in several nativities (both ancient and modern) where the ascend ad♂ of *Mars* (only) did not kill, and yet the ascend *Apheta*, as in this example. For there are several things to be considered, before any one judge death positive, on such a direction as they did in *Picus's* case ; and I think, I am able to shew when such a direction will, and when it will not kill. A specimen in this kind, I will here give you, as an example in this nativity. See the following tablet.

	D	M	Y	M	A	D.
Ascend ad ☐ ♀ in mundo	30	29	33	5	1496	died
Ascend ad ♂ ♂ in mundo	31	55	34	7	1497	
Ascend ad ☐ ♀ in mundo	34	35	—	—	—	
Ascend ad ♂ ♀ in mundo	43	34	—	—	—	

If you observe this short table above, you'll find there was a train of directions to compleat the work, & no good one that intervenes or helps to save life, or remit or break the train, and I am bold to assert where-ever you find the ascend or any of the hilegiacal points that is really *Apheta* (in other nativities) truly directed to the body of *Mars*, with a train of directions attending, as in this example, it shall always prove fatal, be the nativity never so vital or strong. It was not the ascend ad♂ of *Mars* only, the ascend ad☐ of *Saturn in mundo* came up first, but *Mars* was *Poiothanatos* in this case. Yet the mundane ☐ of *Mercury*, and rays of the *Moon* did greatly assist, and in particular did specificate the disorder. I have no account of what disease he died of, but judge by the directions, it was a hec tick delirious fever, attended with nephritic disorders.

EXAMPLE II.

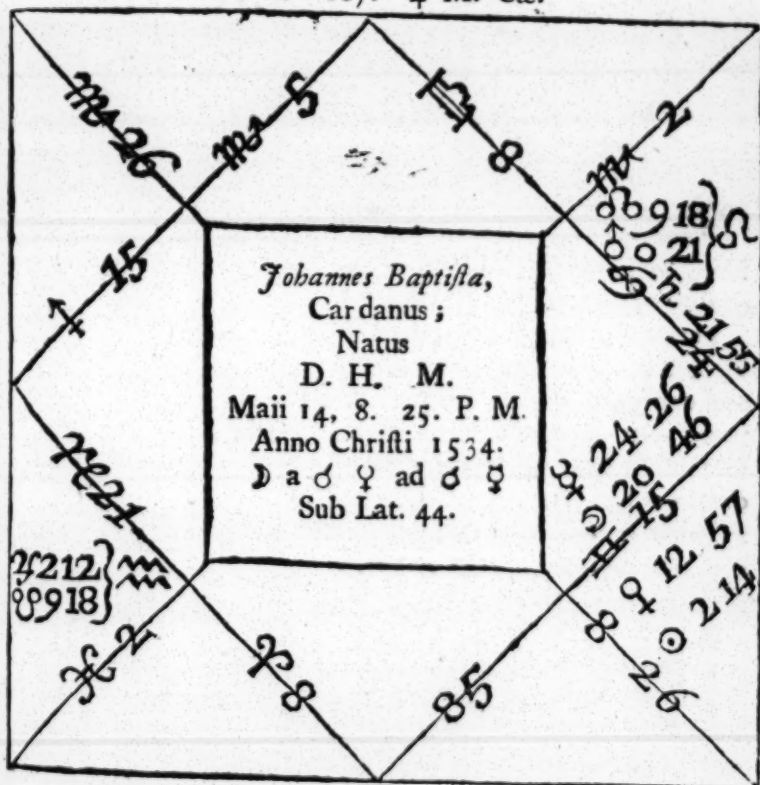

This next example I shall exhibit (to shew the power of the stars, and verity of astrology) shall be in the nativity of *Johannes Baptista Cardanus*, the son of the great *Cardan*, which nativity was printed by his father *Hieronymus Cardanu*, and examined by him, *Naibod* and *Maginus*, three of the greatest masters of astrology in the two last centuries, who could give no sufficient astrological reason

PARTRIDGE, 1753.

reasons for his violent death, And therefore was brought by *Sextus ab Heminga* and *Alexander de Angelis* to abuse the astrologers with, and as an argument to shew the vanity of the art. But in this example, you may see that ignorance was the cause of calumniation.

In short the Story is thus, this *Baptista Cardanus* was brought up to learning, and employed himself in the study and practice of physick, but being involved in misfortunes and perturbations of mind, he committed an unlawful action, and for it was brought to the bar of justice, and condemn'd for his crime (which was poisoning his wife) for which he was beheaded, the way of execution (of those that was guilty of blood) in those parts. And this at the age of almost 26 years, anno 1560. See the figure.

R. A. 187. 4 M. Cæ.

In the first example, the ascend was *Apheta*, but in this the *Moon* is certainly *Hyleg* or giver of life, by bring light of the time and in an aphetical place, and therefore must

PARTRIDGE, 1753.

must be directed for death, and from her directions only we shall find cause sufficient to put a period to his life, which at that time it did; and the principal direction which destroy'd it was the *Moon (Hyleg) ad parallelum ☉ in Zodiaco*, and followed by the parallel *Mars in Mundo d c*; and parallel of *Jupiter in Zodiaco*, and body of *Saturn*. The *Moon* past the parallel of the *Sun* in 14 degrees of *Cancer*, and the ark of direction is 26 d. 26 m. which gives in time 25 years and 10 months, at which time, he fell into that unhappy misfortune. See the following tablet,

	D	MY.	M	A.	C.	
☉ ad parel. ♂ in mun. dd	19	24	18	10	1553	sick and
☾ ad parel. ♀ in mun. dc	24	14	21	8	1556	disorder'd
M. C. ad Δ Venery	24	15	23	8	1558	married
☾ ad parel. ☉ in zodiaco	26	26	25	10	1560	beheaded
☾ ad parel. ♂ in mun. dc	29	2	28	5	1562	
☾ ad parel. ♀ in zodiaco	30	56	30	4	1564	
☾ ad corpus Saturni	34	14	33	8	1568	

Thus you may see there is a strong train of directions to the true *Hyleg*, that compleated that fatal and dreadful sentence, and which are sufficient to kill in any Nativity. 'Tis true ♀'s rays fall in the train, but unable to save by being evil effected, and therefore in part specificates the quality of death.

Perhaps it may be required, for what reason was it a violent death? Why this is very plain, if the positions and configurations of the planets in this nativity be compared with *Ptolomy's* rules, in his *Quadripartite*, B. IV. Chap. IX. where he discourseth about natural and violent deaths: His Words are, *Erunt autem mortes violentæ, & insignes, quando aut ambo malifici dominantur loco intersec- tori, seu conjuncti, seu ex quadrato se aspicientes aut oppo- siti secundum longitudinem, &c* And a little after, in the same chapter, he saith, *Et cum Jupiter aspicit Martem, erunt neces insigniores ex judiciis aut in a ducum aut regum*. Those that please to examine the figure, may find the above rules exactly verified, and may be convinc'd, there is an *Astrology* in being, able to justify its truth, and bid defiance to all the scurrilous invectives of the ignorant antagonists of this laudable and useful science, *A S T R O- LOG Y. Vive, vale*——

Si quid novisti rectius istis

Cardicus imperti: si non his uteris necum

PARTRIDGE 1753.

III. *Judicium Astrologicum, pro Anno, 1753*
Or, *Astrological Observations for the Year 1753.*

Of the Brumal Ingress, or, Winter-Quarter.

*Amount my Muse, let not thy Virgin Flower
Be trampled down by any lower Power,
But soar aloft to the celestial Stars;
And then declare when they do frown us Wars,
Or smile us Peace. O Lord assist my Pen;
Make it a welcome Legate unto Men.*

THIS quarter begins at such Time as the Sun apparently enters the first scruple of Capricorn, and this year 1752, and under the meridian of London, December the 21st day at 40 min. past 8 in the morning, when 13 deg. of ♄ culminates, and 7 deg. of ♀ ascends the horizontal angle, ♄ Lord thereof in ♂ with the ☉ in the 12th. ♀ and ♄ in the ascendant, the ♄ on the cusp of the 7th, lately separated from an ♂ of ♄ and the ☉, and applies to the ♂ of ♄ in the 7th, and ♂ of ♄, thus are the heavens posited at the time of this melancholly ingress. The days are now shortest to all people inhabiting the north side of the equator, the Sun has the greatest declination 23 deg. 29 min. and amplitude 39 deg. 50 min. south, but has now the least meridian altitude which at London is 14 deg. 59 min. at noon. There is in this quarter an ♂ of Sun and ♄, and a ♂ of ♄ and ♄, and an ♂ of ♄ and ♄. These are remarkable configurations, and in the stary dialect, can afford no melodious musick to the macrosm, Cardan says, *Si magna sint causa*, if there happen great causes, great effects shall befall men proceeding from such causes, and if those causes continue long, and be often repeated, it prenotes the effects to be more fierce and terrible, and it has been ever observed, that great or formidable causes, were ever accompanied with suitable and proportionable events to succeed them. We now labour under the effects of the opposition of ♄ and ♄ from ♄ and ♄, and the same aspect is repeated again this quarter from ♄ and ♄. This seems to menace a great catastrophe to some part of the Christian world, I may say in the words of Pontanus, *Magnum opus, & jam signa dei fulgentia terrent* &c. God is now doing a great work, his glittering signs affright us, we hear the noise of weapons and sound of

trumpets

PARTRIDGE, 1753.

trumpets, God himself inclines to punish with a sharp bridle, God shakes darts over us, and thunders with his angry voice; pale fear and trembling drive away men equally yoked in the same condition of misery: Hard-hearted threatening, sanguine dread gives warning before the lash. I say, we may now see their effects, and if they may not properly be call'd causes of future events, we may certainly look upon them as signs sent from the supreme being, to forewarn the world of his wrath, at their sins and abominations. And this we may certainly conclude that there are no notable transactions, either good or bad, of publick concernment in the world, which have not some manifestation from the celestial bodies. From the position of the planets at the ingressional figure, we may expect cold winds, nipping frosts, and plentiful falls of snow and rain; in several places, many diseases in human kind not easily cured, a calamity and loss in great cattle and small, distemper'd minds and affections are now forwarding their pernicious designs – From plots and conspiracies, *libera nos, domine*. These male aspects do often fill the air with heterogene and obnoxious atoms, causing thereby much unseasonable and uncertain state of air, with great sickness and mortality.

*But unto God we will leave the event,
Who rules the stars which he for signs hath sent;
And makes them fight in the defence of those,
That in their God doth their whole trust repose.*

IV. Of the Vernal, or Spring Quarter.

THE Spring is the most beautiful and pleasant time of all the year, and it is the opinion of most authors, that the great and stupendious work of GOD (the creation of the world) was perfected in the spring; and Virgil seems to be of this opinion, by the elegant and lofty strain in the second book of his *Georgicks*, viz.

*In this soft season let me dare to sing,
The world was hatch'd by heaven's imperial king
In prime of all the year, and holiday of spring.
Then did the new creation first appear,
Nor other was the tenour of the year;
When smiling heaven did the great birth attend,
And eastern winds, their wintry breath suspend;*

There

PARTRIDGE, 1753.

*Then sheep first saw the sun in open Fields,
And savage beasts were set to stock the wilds ;
And golden stars flew up to light the skies,
And man's relentless race from stony quarries rise ;
Nor could the tender new creation bear,
The excessive heats and coldness of the year :
But chill'd by winter, or by summer fir'd,
The middle temper of the spring requir'd,
When warmth and moisture did at once abound,
And heaven's indulgence brooded on the ground.*

This quarter begins when the *Sun* apparently touches the first point of the equinoxial sign *Aries*, which happens this year upon the 20th day of *March*, at 31 min. 28 sec. past 10 in the morning, when 6 deg. of *Pisces* culminates, and 10 deg. of *Cancer* ascends; and by taking a survey of the figure, I find *Saturn* and *Jupiter* in opposition from tropical signs and horizontal angles, and both in square to the luminaries, *Jupiter* being Lord of the 10th, and *Saturn* of the 7th, 8th, and 9th houses, the *Moon* in 15 deg. of *Libra* in the 5th defluxing, from a square of *Saturn* and *Jupiter*, and faltens to a square of *Mars*. These are aspects and positions of a very inimical nature, and have important significations, for if quadrate and opposite aspects have signification of discord, contention, division, breaches of friendship, and the like, as it is generally accounted they have, then it may be fear'd we may hear of much discordant actions and proceedings, and 'tis my opinion this may prove a year of admiration, the opposition of *Saturn* and *Jupiter* from cardinal signs and angles will most powerfully enforce their effects, and do undoubtedly signify some mighty changes and great alterations to happen in the world. *Saturn* and *Jupiter* are the two celestial movers, and therefore are of more eminent signification than any other of the planetary bodies, and being cardinal signs they are endued with the greater ability to act and perform, the greatest and most stupendious changes and alterations in the public laws and customs, religious rites and ceremonies. The world is now possessed with many doubts and fears of some approaching catastrophe, in which *Holland*, *Zealand*, and *Prussia* seem to be more than ordinarily concerned; *Venice*, *Tunis*, *Genoa*, *Milan*, &c. involved into confusion by treacherous and pernicious Councils.

Sigana.

PARTRIDGE, 1753.

Siccona, Portugal, Pannonia, Austria and Savoy, molested with intestine divisions, great murmurings and discontent of the common people at the actions of their superiors: But the kingdoms of *Ariana, Macedonia, Illyria, Thracia, Bulgaria, Greece, Massovia, Thuringia, Nassia, &c.* will in the greatest degree be made sensible of the malevolence of the planetary energy, in this and some succeeding years; and so I fear will several other nations and cities in *Europe*. These are cautionary admonitions to beware of impending dangers both from public and private enemies, as well as from particular calamities and misfortunes by storms, tempests, earthquakes, and inundations; epidemical sickness and great mortality. I hope and wish all may continue well at home, and that our honourable city of *London* may triumph in peace, health and a flourishing Trade.

*A cording to the nature of the stars,
Their dire effects promote intestine wars:
In severall countries great disorders found;
Some ships i' th' sea are also run a-ground.
Raging distempers too we've cause to fear
Within the compass of the solar year.*

V. Of the Festival or Summer Quarter.

THIS quarter begins this year, on the 21st Day of *June*, at 51 min. past 9 in the morning; at which time the beginning of *Gemini* is on the *Medium Cali*, and 7 degrees of *Virgo* transits the oriental angle; *Mercury, Almuton* thereof in his domal dignities in the 10th in $\odot$ with *Venus* and $\ast$ to *Mars*. The luminaries in mundane Δ from 7th and 11th. *Mars* potent in *Aries*, the *Moon* departing from a Δ of the *Sun*, and applying to the $\ast$ of *Saturn*. These are amicable and happy positions, and promise much felicity to the *English* nation in particular, and propends mens minds to peace and amity; whence we may expect that many eminent and long continued breaches and divisions are now friendly adjusted, to the great satisfaction of opponent and respondent. The $\odot$ of the $\odot$ and $\odot$ from $\odot$ and $\odot$, and also the $\square$ aspect of $\odot$, to $\odot$, the $\odot$ and $\odot$ from cardinal signs, is of a malevolent import to the several kingdoms and cities, passive to those constellations, and
may

P A R T R I D G E, 1753.

may in some measure, imbitter that felicity we might otherwise expect to enjoy. But to sum up all, tho' there is no felicity to be expected without alloy, the contingencies of this quarter will in all probability be more salubrious and pleasant than either of the two preceeding quarters, and the produce of the earth rich and plenteous.

*Happy are those that live at rest and ease,
And study to promote each others peace :
The wars in remote places keep their station,
And 's like to be the ruin of some nation.
But who can help it, since without a cause
They both corrupt, and break thro' wholesome laws.*

VI. Of the Autumnal Quarter.

THIS quarter begins this year on the 22d Day of September, at 2 min past 11 at Night, when 14 degrees of *Pisces* is on the mid-heaven, and 16 deg. *Cancer* possess the oriental angle. The planets are all *sub Terra*, except δ , who is on the cusp of the 12th in 2 deg. of Π , in $\ast$ to the Δ , and Δ of the *Sun*, who is in partile $\square$ of η . The Δ in the 2d separating from a $\ast$ of δ , and applying to δ of Υ and ϱ . Thus stands the Face of heaven at this ingress. The positions do much participate in Nature and quality, and will have effects agreeable to what we have before asserted in our judgment on the preceeding quarter, to which place we refer the reader.

VII. Upon the Eclipses.

THIS year affordeth four eclipses, two of the *Sun*, and two of the *Moon*; but one of each luminary visible. They happen in the following order,

The first is a visible eclipse of the *Moon*: it happens on Tuesday the 17th Day of April at night; when, if the air be clear, the *Moon* may be seen eclipsed at her rising, but for the Time of her appearance, see the following calculation,

The

PARTRIDGE, 1753.

	h. m.	
The beginning of the eclipse	5 29	}
The <i>Moon</i> rises at	6 59	
The middle	6 41	
The end	8 51	
Digits eclipsed	5 25	

Afternoon.

The second is an invisible eclipse of the *Sun*; on *Thursday* the 3d of *May*, at half an hour past seven in the morning.

The third is an invisible eclipse of the *Moon*; it happens on *Friday* the 12th day of *October*, at half an hour past 9 in the morning.

The fourth and last is a great and visible eclipse of the *Sun*. It happens on the 26th day of *October*, and at *London* it may be expected to correspond with the following calculation,

	D. H. M.	
The eclipse begins <i>Oct.</i>	26 8 33	}
The middle of the eclipse	9 44	
Visible conjunction	9 43	
The end of the eclipse	10 56	
Total duration	2 23	
Digits eclipsed	8° 24'	

Morning.

This is the greatest visible eclipse of the *Sun* that will be seen in these parts till the first day of *September*, 1764. This eclipse also requires an astrological consideration, but as the effects will not be conspicuous this year, — I think another will be time enough to enlarge on its Portends.
